

Acetona Energy Liquid – Power for lactation

Suomen
Rehu

Two pathways are better than one!

Acetona Energy Liquid has a unique composition specifically designed to support cows during the transition period and under heat stress conditions.

The product contains blood glucose precursors and products to support liver function in a highly palatable formulation. Through the supplementation of blood glucose precursors helps to maintain blood sugar levels sufficiently high so the risk of ketosis decreases.

Xylitol is a highly palatable sugar substitute which by passes the rumen and synthesizes blood glucose through the pentose phosphate pathway. In combination with propylene glycol the effect on blood glucose levels is both strong and long lasting. Niacin helps to support liver function. Molasses helps to improve palatability of the overall product.

The result is a high energy supplement for cows which is both palatable and effective.

Feeding instructions:

An effective energy supplement for transition cows 0,5 kg/day

- Begin feeding 2 weeks before calving and continue up to 8 weeks post calving. The dose can be doubled for 1–2 weeks period as required.
- Easy to administer in a TMR or in a robot milking station.

More robot visits

- Dose high palatable Acetona Energy Liquid in milking robot.
- Begin feeding immediately after cows have been moved into robot group. Dose 0,5 kg/day up to 8 weeks after calving.
- To support good cow traffic continue dosing 0,2–0,3 kg/day until the end of lactation.

To encourage better silage intake and for improving diet palatability

- Especially effective in case of heat stress.

Acetona Energy Liquid:

- high energy feed
- supports blood glucose levels
- very palatable
- easy to use

Nature Creates – we refine

At Suomen Rehu, we combine large scale animal feed production with dynamic and highly innovative research and development. Coming from a country so far north as Finland, it has always been the case that we must add value and be innovative to survive. New product innovations and patented feeding solutions are the forces that drive us forward.

Acetona Energy liquid, from our Acetona range of products, is a unique product for feeding to dairy cows around calving. A palatable, high energy liquid feed designed to help optimize blood glucose levels in early lactation.

The harsh winter climate covers the country in a blanket of snow and ice. Temperatures fall to –25 degrees c, the seas freeze over and the beautiful Aurora Borealis lights up the sky. We are inspired by nature.
