

# ACETONA ENERGY<sup>POWER</sup>

Power for lactation

## IMPROVED MILK YIELD

- Acetona Energy<sup>Power</sup> supports good feed intake and increases milk yield
  - A unique mixture of sugar alcohols (polyol) and propylenglycol effectively increase cows' blood glucose after calving
  - Efficiently prevents subclinical ketosis

## BETTER FERTILITY AND RUMEN FUNCTION

- Prevents subclinical ketosis and excessive weight loss thus improving fertility
- Innovative patented feed ingredients Progres<sup>®</sup> and Progut<sup>®</sup> support cow's health and enhance rumen fermentation
  - Slow down weight loss and improve feed efficiency
  - Efficiently support gut health → better immunity

## EXCELLENT PALATABILITY SUPPORTS FEED INTAKE

- Sugar mixture, molasses, and beet pulp ensure excellent palatability
- Higher blood glucose results in better feed intake and milk yield in early lactation

## Focus on newly calved cows pays back!

**Prevent subclinical ketosis, reduce expenses  
250 €/cow/year!**

**Subclinical ketosis decreases milk yield  
2–3 kg/cow/day, impairs reproductive  
efficiency, extends calving interval, and  
raises the risk of diseases and premature  
culling during lactation period.**

- Energy 13,3 MJ/kg dm
- Crude protein 11,0 % dm
